[TECHMANTHAN 2026]

[Problem Theme / Track]

[Problem Statement Title]

TEAM

[Team Name]

Member 1 | Member 2 | Member 3
Member 4 | Member 5

INSTITUTION

[College / University Name]

PROBLEM STATEMENT

What is the Problem?

- Clearly define the problem you are solving
- Be specific and concise

Who is Affected?

- Target users / communities
- Scale of impact
- Demographics affected

Why is it Important?

- Urgency of the problem
- Consequences if unsolved
- Social / economic impact

REAL-WORLD EXAMPLE

[Add a compelling real-world scenario, news report, or statistic that illustrates the severity of this problem]

PROBLEM ANALYSIS

Current Challenges

- Challenge 1: [describe]
- Challenge 2: [describe]
- Challenge 3: [describe]
- Challenge 4: [describe]

Existing Solutions

- Solution A: [name & brief desc]
- Solution B: [name & brief desc]
- Solution C: [name & brief desc]

Gaps in Current Systems

- Gap 1: [what's missing]
- Gap 2: [what's missing]
- Gap 3: [what's missing]
- Why these gaps matter

PROPOSED SOLUTION

YOUR IDEA

[Explain your solution clearly in 2-3 sentences. What does it do? How does it work at a high level?]

How It Solves the Problem

- Addresses [specific problem aspect]
- Automates / streamlines [process]
- Provides [specific benefit]
- Reduces [specific pain point]

Key Features

- Feature 1: [name & description]
- Feature 2: [name & description]
- Feature 3: [name & description]
- Feature 4: [name & description]

INNOVATION & UNIQUENESS

What Makes It Different?

- Novel approach / algorithm
- Unique data usage or integration
- Creative UX / interaction model
- First-of-its-kind combination
- Patent-worthy technique

Why Is It Better?

- Compared to [Existing Solution A]:
- Faster / More accurate / Cheaper
- Compared to [Existing Solution B]:
- Better UX / More scalable
- Your USP in one line: [...]

SYSTEM ARCHITECTURE

[INSERT ARCHITECTURE DIAGRAM HERE]

Use draw.io, Lucidchart, or Excalidraw
to create your system flow diagram

Components

- Frontend: [React / Flutter]
- Backend: [Node / Django]
- AI/ML: [Model name]
- Database: [MongoDB / SQL]
- APIs: [list key APIs]
- Cloud: [AWS / GCP / Azure]

This slide directly impacts your Technical Approach score

TECHNOLOGY STACK

Languages

- Python
- JavaScript
- SQL
- [Add more]

Frameworks

- React / Next.js
- Flask / FastAPI
- TensorFlow / PyTorch
- [Add more]

AI/ML Models

- [Model 1 — purpose]
- [Model 2 — purpose]
- [Pre-trained / Custom]

APIs & Tools

- [API 1 — purpose]
- [API 2 — purpose]
- Git, Docker, CI/CD

DATASET & DATA USAGE

Dataset Name	Source	Size	Usage
[Dataset 1]	Kaggle / Govt / Custom	[rows / GB]	[Training / Inference]
[Dataset 2]	[Source]	[rows / GB]	[Purpose]

Data Pipeline & Usage

- Data Collection: [how you gather or access data]
- Preprocessing: [cleaning, normalization, feature engineering]
- Model Training: [which data trains which model]
- Validation: [train/test split, cross-validation approach]
- Real-time Usage: [inference pipeline, API integration]

IMPLEMENTATION PLAN

DAY 1 — Build Foundation

- Setup environment & repos
- Data collection & preprocessing
- Core backend development
- ML model training / integration
- Basic frontend scaffold
- Initial API endpoints

DAY 2 — Complete & Polish

- Frontend UI completion
- Backend-Frontend integration
- AI/ML model fine-tuning
- Testing & bug fixes
- Demo preparation
- Presentation & pitch practice

EXPECTED OUTCOME

[Describe what your system will produce — e.g., an intelligent dashboard that displays real-time alerts, a chatbot that answers domain-specific queries, an automated report generator, etc.]

Dashboard / UI

[Real-time monitoring, analytics, visualizations]

AI Output

[Predictions, classifications, recommendations, NLP results]

Alerts / Reports

[Automated notifications, PDF reports, actionable insights]

IMPACT & SCALABILITY

Real-World Application

- [Describe real-world deployment scenario]
- [Industry / sector applicability]
- [Integration with existing systems]

Who Will Benefit?

- End users / citizens
- Organizations / businesses
- Government agencies

Scalability Plan

- Horizontal scaling: [cloud deployment, microservices]
- Vertical scaling: [can handle more users / data]
- Multi-region / multilingual support
- Modular architecture allows feature extension

DEMO PLAN

THIS SLIDE IS CRITICAL FOR YOUR FINAL ROUND EVALUATION

Demo Flow

- Step 1: [Show landing / login page]
- Step 2: [Demonstrate core feature]
- Step 3: [Show AI/ML in action]
- Step 4: [Display results / output]
- Step 5: [Edge case handling]

What Will You Show?

- Live prototype / deployed app
- Working AI model output
- UI screenshots / video backup
- Sample test data ready
- Fallback plan if live demo fails

TEAM DETAILS

?

[Member 1]

Team Lead / Full-Stack Dev

?

[Member 2]

AI/ML Engineer

?

[Member 3]

Backend Developer

?

[Member 4]

Frontend / UI Designer

?

[Member 5]

Presenter / Research

Thank You!
